Project-Launch Overview

Motivating Question:

- What social & linguistic factors predict variation in the use & interpretation of *they*?

Core components of the project:

- Acceptability judgement task
- Sentence-completion task
- Self-paced reading task

What we want feedback on:

- How we gather our social measurements
- The best ways to target participant populations

Overview

Core Question

Design Factors: Linguistic

Design Factors: Social

Future Directions

Core Question

How do social/linguistic variables predict use/comprehension of sg. they?

Some Prior Findings: acceptability

Prior findings: There are patterns of acceptability that are mediated by social and linguistic factors [Ackerman 2018, Bjorkman 2017, Conrod 2019, Hekanaho 2020, Conrod et al. *in press*, a.o.]

- (1) Definite plural *they*: *Those dentists* smiled before *they* sneezed.
- (2) Quantified/indefinite *they*: *Every dentist* smiled before *they* sneezed.
- (3) Definite singular *they*: *That dentist* smiled before *they* sneezed.

	Dialect A	Dialect B	Dialect C
(1) Def. pl. <i>they</i>	Acceptable	Acceptable	Acceptable
(2) Quant. <i>they</i>	Proscribed	Acceptable	Acceptable
(3) Def. sg. <i>they</i>	Unacceptable	Liminal	Acceptable

Overview

Core Question

Design Factors: Linguistic

Design Factors: Social

Future Directions

Core Components: Three Designs

Socio-pragmatics

Sentence completion

- Fill-in-the-blank, targeting syntactic positions that require pronouns

Task: Put a word in the blank to complete this sentence.

“My client (Casey) was not in _____ right mind.”

Off-line acceptability

- Naturalness ratings using a Likert scale (1-5)

Task: Rate this sentence’s naturalness.

“My client (Casey) was not in their/his right mind.”

Socio-syntax

On-line comprehension

- Self-paced reading (grammaticality Maze)

Task: Read the sentence as it appears one word at a time

“Before they/he left, the tall client(s) sneezed.”

For all stimuli, antecedent nouns/names are gender-normed (*pulling from Misersky et al. 2013 and Flowers 2015*)

Socio-Pragmatic Studies (*usage/acceptability*)

Question: When the speaker doesn't commit to / want to reveal the gender of the (definite/specific/named) referent, when does sg. *they* get used/accepted?

<i>antecedent</i>	<u>gender not concealed</u>	<u>gender concealed</u>
<u>common noun</u>	(4a) My client, whose testimony we witnessed earlier, was not in PRONOUN right mind ...	(4c) My client, who prefers to remain anonymous, was not in PRONOUN right mind ...
<u>proper name</u>	(4b) My client Casey, whose testimony we witnessed earlier, was not in PRONOUN right mind ...	(n/a)

Usage: Sentence Completion

- **PRONOUN** = blanks

Acceptability: Likert Scale Rating

- **PRONOUN** = their/his/her

- All stimuli in the project repo at <https://osf.io/5mvpz/>
- Demo usage task at <https://farm.pcibex.net/r/WYCAgE/>

Socio-Syntactic Study (*processing*)

Broad Question: How do more conscious (off-line) acceptability/production behaviors correlate with unconscious (on-line) language-processing behavior?

Narrow Question: Given a cataphoric pronoun, what predictions do speakers of different dialects make about upcoming referent?

(5a) After they finished, that cellist took a bow.	PL pronoun ⇒ SG subject (sg. they)
(5b) After they finished, those cellists took a bow.	PL pronoun ⇒ PL subject
(5c) After he finished, that cellist took a bow.	SG pronoun ⇒ SG subject
(5d) After he finished, those cellists took a bow.	SG pronoun ⇒ PL subject

- All stimuli in the project repo at <https://osf.io/5mvpz/>
- Demo processing task at <https://farm.pcibex.net/r/RugJWe/>

Overview

Core Question

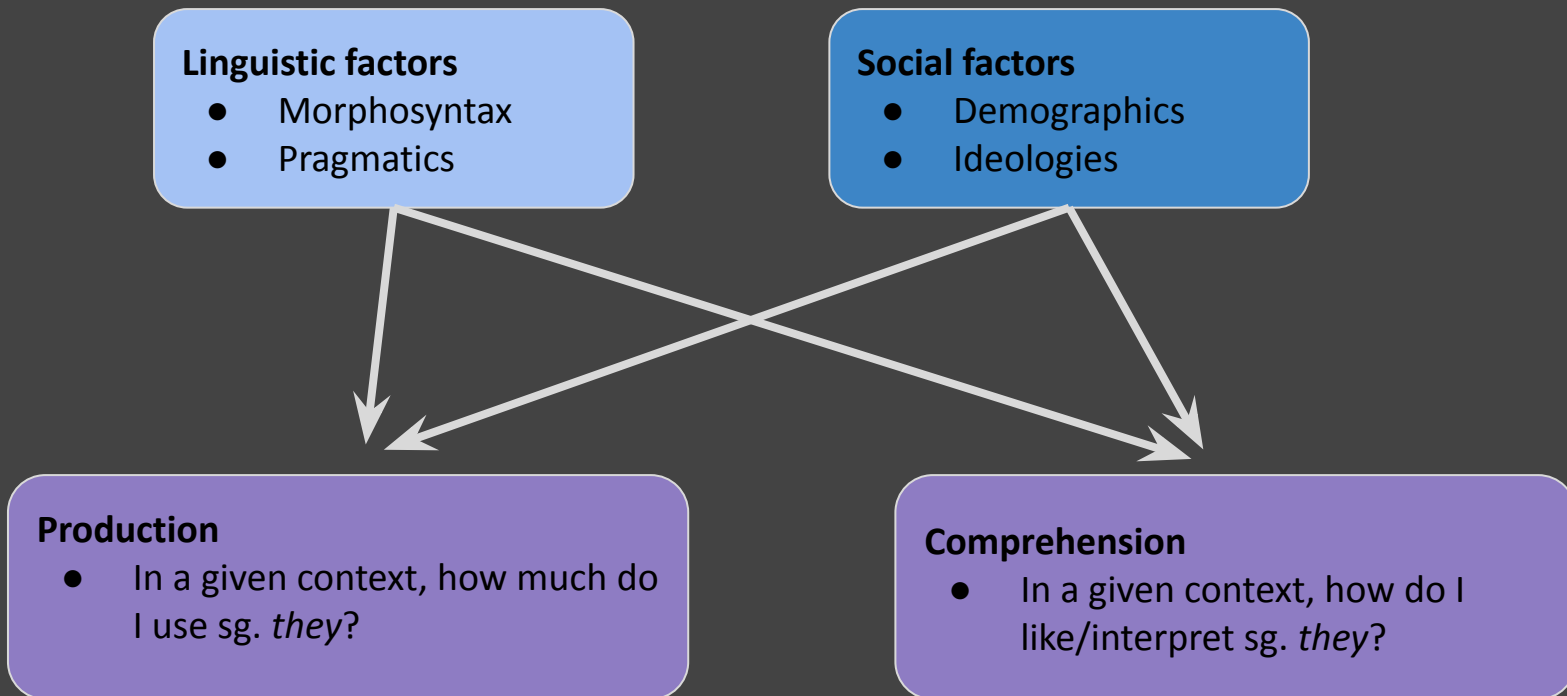

Design Factors: Linguistic

Design Factors: Social

Future Directions

Project Overview

Reminder! We have design/experimental factors (IVs) that are linguistic and social:

Targeting demographic variables

What questions would best capture these variables?

- **Gender:** cis vs. trans, non-binary vs. binary, 'naive' cis vs. 'in-the-know' cis
- **Age:** older vs. younger
- **Location:** urban vs. rural, coastal vs. heartland, place of origin vs. current location
- **Sexuality and queer-familiarity:** LGBTQ identity, queer community members, etc.
- **Factors without predictions:** socioeconomic status (profession, class, education), ethnicity, race
- **Neurotypicality** (for reading task): memory/attention disorders

Post-task demographics questionnaire

- Link to draft: <https://bit.ly/theyQs>

Targeting ideological variables

What questions would best capture these variables?

- ***Political ideology***: conservative vs. liberal
- ***Gender ideology***: benevolent sexism, binarist views, transphobia, trans-acceptance
- ***Language ideology***: (benevolent) prescriptivism scale

Post-task ideologies questionnaire

- Link to draft: <https://bit.ly/theyQs>

Targeting Participant Populations

No targeting specific demographics: A very large, random sample

$N = 1,000$ adult American native English speakers

Pre-task targeting with Prolific (with demographic/ideological surveys in the task)

- Some large sample(s) with demographic targets

$N = 500$ participants, including x trans people, y women, z people under 40, etc.

- Multiple smaller studies targeting specific populations

$N_1 = 100 = 50$ cis + 50 nonbinary 18-25 year olds

$N_2 = 100 = 25$ trans/nonbinary people in four age brackets

⋮

Pre-task targeting with our surveys:

- Run our surveys on Prolific first, to achieve targeting for exp'ts as described above

Overview

Core Question

Design Factors: Linguistic

Design Factors: Social

Future Directions

Goals moving forward

- Social perception study to explore social meaning
- Finer-grained analysis of intersections of social variables
- Connections between sociolinguistics and psycholinguistics
- Analyze debriefing questions targeting metalinguistic awareness of pronoun variation
- Sociolinguistic interview: variation driven by conscious and/or subconscious attitudes?
- Look for ways of eliciting sg *they* or other pronouns (without clear prompt)
 - Large-scale online (not interviews) but more naturalistic (not fill-in-the-blank)
- Differences between on-line and off-line responses?
 - Conscious vs. subconscious variation (*e.g., ratings vs. reading times*)

***Sociolinguistic
Theorizing***

***Qualitative
Work***

***Quantitative
Work***

Questions Asked During Q&A

Project Repository

- Link to the repository for this project:

[`https://osf.io/5mvpz/`](https://osf.io/5mvpz/)

- This repository will host:
 - Preregistrations for each experiment
 - All experimental materials (stimuli and PClbex code)
 - Survey instruments
 - Handouts, slides, and manuscripts

Thanks and Acknowledgements

Thank You!

Thanks to the rest of the Scientific Explorations of Pronouns and Trans Acceptance (SEPTA) consortium of labs, the past and present RAs in these labs, Lauren Ackerman for sharing gendered name data, Brian Dillon and Matt Wagers for helpful discussion on reading tasks, and Princeton University and Swarthmore College for funding research and travel.
